

Article title: Spatial Distribution and Birth Prevalence of Congenital Heart Disease in Iran: A Systematic Review and Hierarchical Bayesian Meta-analysis

Journal name: International Journal of Health Policy and Management (IJHPM)

Authors' information: Roghaye Farhadi Hassankiadeh¹, Annette Dobson², Somayeh Rahimi³, Abdollah Jalilian⁴, Volker J Schmid⁵, Behzad Mahaki^{1*}

¹Department of Biostatistics, School of Health, Kermanshah University of Medical Sciences, Kermanshah, Iran.

²School of Public Health, University of Queensland, Brisbane, QLD, Australia.

³Department of Clinical Biochemistry, Kermanshah University of Medical Sciences, Kermanshah, Iran.

⁴Department of Statistics, Razi University, Kermanshah, Iran.

⁵Department of Statistics, Ludwig-Maximilians-University, Munich, Germany.

Figure S1. Moran's diagram for the standardized prevalence of total CHD per 1000

Spatial Autocorrelation Report

Given the z-score of -0.732132899747, the pattern does not appear to be significantly different than random.

Global Moran's I Summary

Moran's Index:	-0.112180
Expected Index:	-0.033333
Variance:	0.011598
z-score:	-0.732133
p-value:	0.464087

Figure S2. Forest plot displaying Odds and corresponding 95% credible interval Odds in reported subtypes of CHD studies (17 studies) in Iran

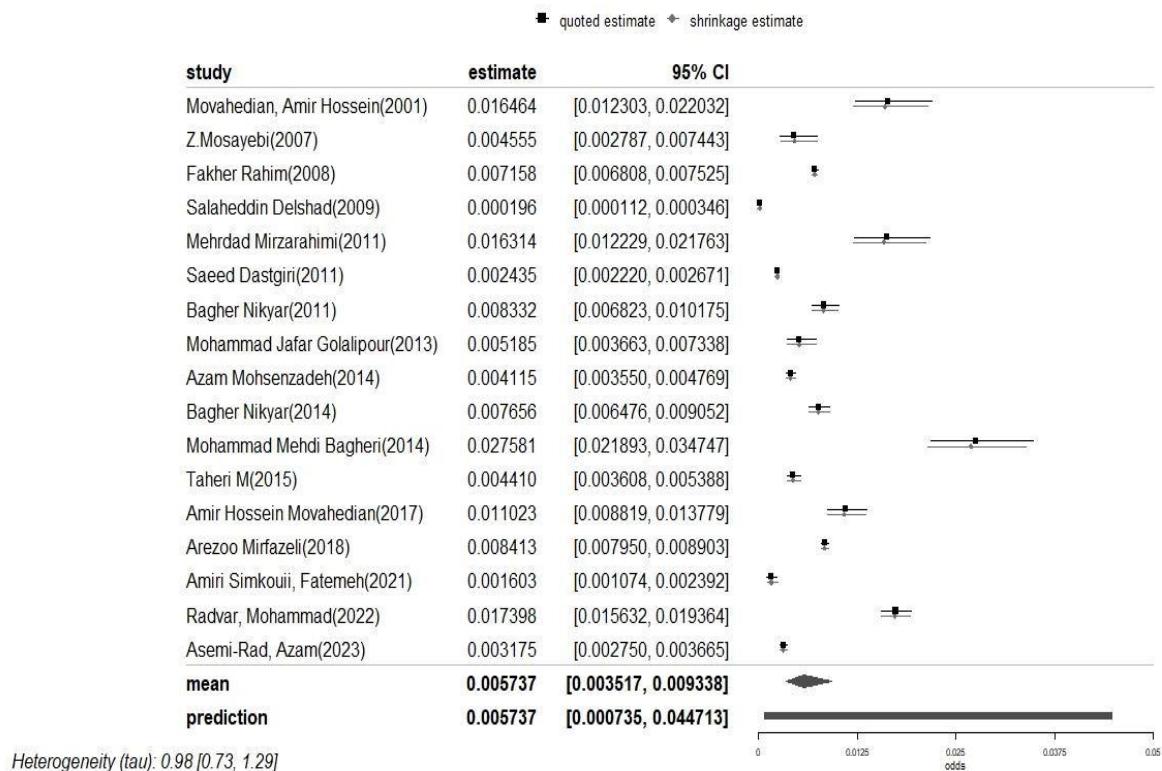

Figure S3. The red lines indicate (approximate) 2-dimensional credible regions, for the joint distribution, Blue lines illustrate the conditional mean effect (Log Odds) as a function of the heterogeneity τ (solid line) with conditional 95% confidence bounds (dashed lines). The green lines show marginal medians and the shortest 95% credible intervals for Log (Odds) and τ . A darker coloring denotes higher posterior density values.

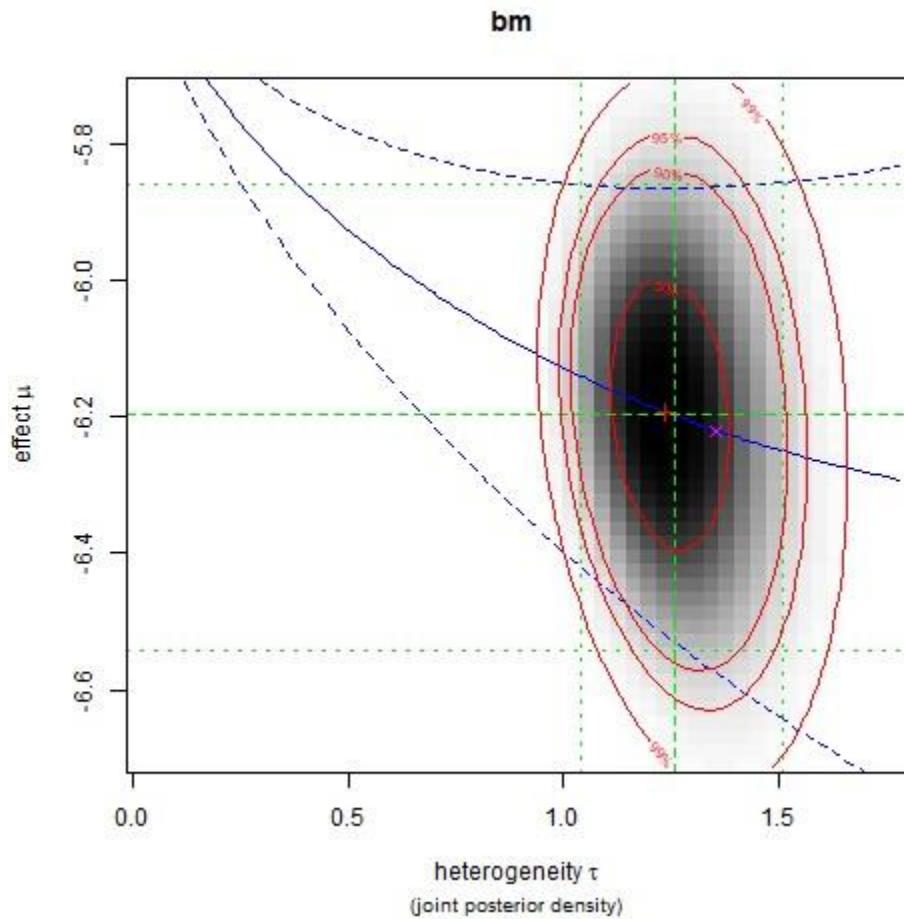

Figure S4. Funnel plot, showing effect estimates (log-odds) vs. their standard errors (σ_i)

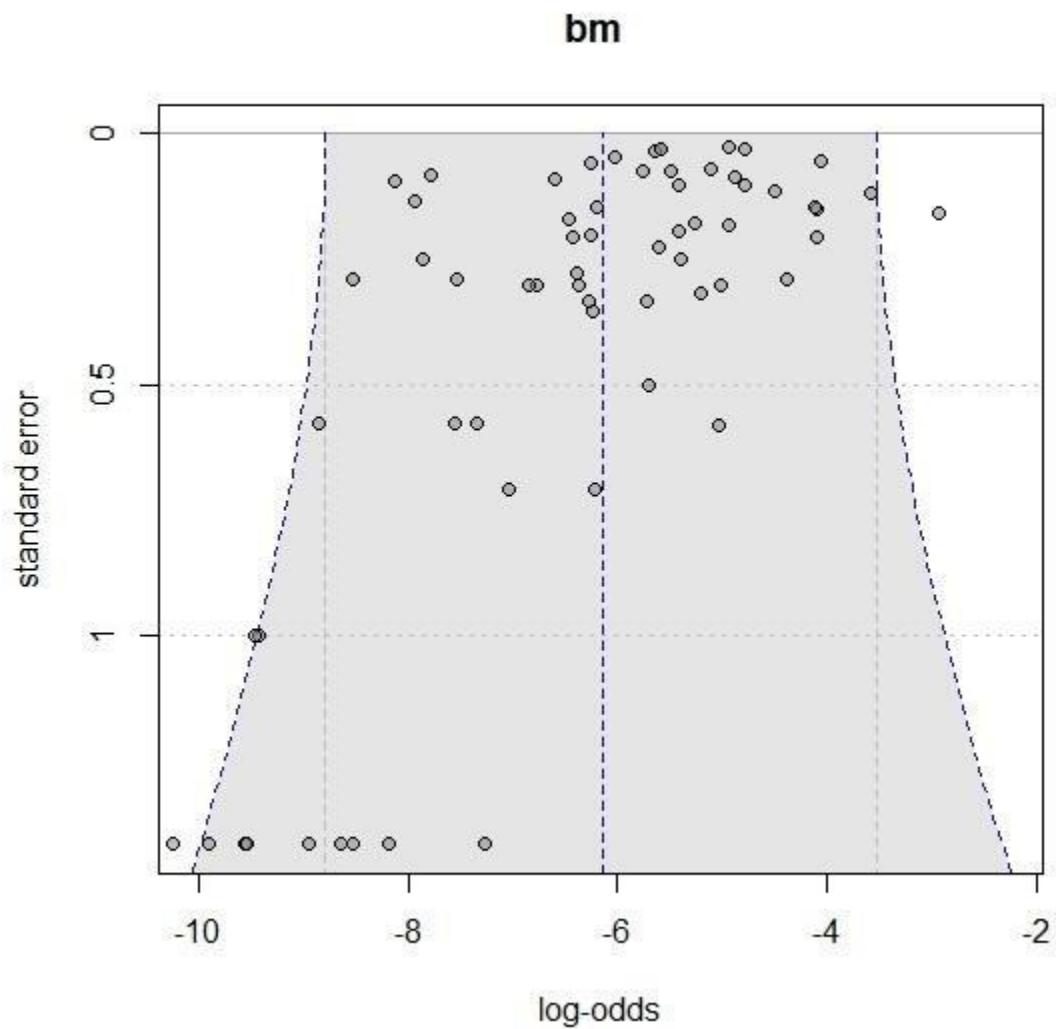

Table S4. Subgroup Analysis for Total and Specific CHD Subtype Birth Prevalence in Iran

variables	levels	Number of Studies	Total	Event	Percentage heterogeneity [I ²]	Pooled log odds [95% Credible interval]	Absolute heterogeneity test τ^2 [95% CI]
